Subject Index of Volume 110

Adiabatic shear band
A study of high-rate shearing of commercially pure aluminum sheet, 253
AISI 316L
Study on the effects of pulsed TIG welding parameters on delta-ferrite content, shape factor and bead quality in orbital welding of AISI 316L stainless steel plate, 233
Almen intensity
Relating Almen intensity to residual stresses induced by shot peening: a numerical approach, 277
Aluminium oxide
High-speed grinding with CBN grinding wheels — applications and future technology, 78
Aluminum
A study of high-rate shearing of commercially pure aluminum sheet, 253
Aluminum particulate matrix composite
Machining and fluidity of 356Al/$SiC_{(p)}$ composites, 152
Anisotropic parameter
Generalised yield criteria of porous sintered powder metallurgy metals, 182
Arbitrary Lagrangian–Eulerian
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
Arc length
An analysis of volumetric radiation heat flux and experimental comparison with arc light sensing in GTA welding process, 104
Arc light intensity
An analysis of volumetric radiation heat flux and experimental comparison with arc light sensing in GTA welding process, 104

Bending angle
An experimental study of laser bending for sheet metals, 160
Bending process
Finite element analysis and design in stainless steel sheet forming and its experimental comparison, 70
Bending tests
A note on a numerically controlled precision system for sheet metal bending tests, 244
Blank-holding force
Erratum to "Investigations into the hydraulic-pressure augmented deep drawing process" [J. Mater. Proc. Technol. 105 (1/2) (2000) 161–175], 112
Blanking
A compact and practical CAD/CAM system for the blanking or piercing of irregular shaped-sheet metal products for progressive working, 36
Evaluation of ductile fracture models for different metals in blanking, 312
Buffer sheets
Processing of buffer sheets for sintering of PLZT tapes, 47
Burnishing action
A review of research into the role of guide pads in BTA deep-hole machining, 61
Burr in drilling
Economic drilling conditions for a given deburring radius, 197

CAD
A compact and practical CAD/CAM system for the blanking or piercing of irregular shaped-sheet metal products for progressive working, 36
CBN grinding wheels
High-speed grinding with CBN grinding wheels — applications and future technology, 78
Chip formation
Finite element simulation of chip formation in orthogonal metal cutting, 19
Cohesive stress
Research on the cohesive stress in the freezing process of a composite model with materials of different elastic modulus, 132
Cold strip rolling
On constructing kinematically admissible velocity fields in cold sheet rolling, 287
Composite model
Research on the cohesive stress in the freezing process of a composite model with materials of different elastic modulus, 132
Composities
The effects of production parameters on the electrical resistivity of Cu/M_7C_3–$M_{23}C_6$ MMCs, 177
CONFORM process
Parametric investigation on the curling phenomenon in CONFORM process by three-dimensional finite element analysis, 53
Curling phenomenon
Parametric investigation on the curling phenomenon in CONFORM process by three-dimensional finite element analysis, 53
Cutting
Finite element simulation of chip formation in orthogonal metal cutting, 19

3D
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
3D strain measurement
Experimental and numerical determination of texture evolution during deep drawing tests, 300
Deburring cost
Economic drilling conditions for a given deburring radius, 197
Deep drawing tests
Experimental and numerical determination of texture evolution during deep drawing tests, 300
Deformation
A coupled finite element method for a three-dimensional analysis of the flat rolling of aluminum with different reductions, 10
Deformation analysis
On constructing kinematically admissible velocity fields in cold sheet rolling, 287

Elsevier Science B.V.
PII: S0924-0136(01)00554-4

Deformation model
On constructing kinematically admissible velocity fields in cold sheet rolling, 287
Ductile fracture
Evaluation of ductile fracture models for different metals in blanking, 312

ECD time
Economic drilling conditions for a given deburring radius, 197
Edge-face quality
A study of high-rate shearing of commercially pure aluminum sheet, 253
Effective factor
The effective factors in the warpage problem of an injection-molded part with a thin shell feature, 1
Effective strain
A new pore closure concept for the manufacturing of heavy rings, 324
Electrical conductivity
The effects of production parameters on the electrical resistivity of Cu/M_7C_3–$M_{23}C_6$ MMCs, 177
Electrodes
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Electro-discharge machining
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Electroforming
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Experimental design
The effective factors in the warpage problem of an injection-molded part with a thin shell feature, 1
Experimental methods
A note on a numerically controlled precision system for sheet metal bending tests, 244

FEM
Evaluation of ductile fracture models for different metals in blanking, 312
FEM simulation
Numerical and experimental research of the cold upsetting–extruding of tube flanges, 28
Ferrites
Self-propagating high temperature synthesis of $MFe_{12}O_{19}$ (M = Sr, Ba) from the reactions of metal superoxides and iron metal, 239
Finite element
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
Relating Almen intensity to residual stresses induced by shot peening: a numerical approach, 277
Finite element method
Finite element analysis and design in stainless steel sheet forming and its experimental comparison, 70
Three-dimensional thermo-mechanical finite element simulation of the vertical–horizontal rolling process, 89
Optimum path forming technique for sheet metal and its realization in multi-point forming, 136
Finite element model
A coupled finite element method for a three-dimensional analysis of the flat rolling of aluminum with different reductions, 10
Finite element simulation
Finite element simulation of chip formation in orthogonal metal cutting, 19
Flank wear
Machining and fluidity of $356Al/SiC_{(p)}$ composites, 152
Flat rolling
A coupled finite element method for a three-dimensional analysis of the flat rolling of aluminum with different reductions, 10
Flow stress
Generalised yield criteria of porous sintered powder metallurgy metals, 182
Fluidity
Machining and fluidity of $356Al/SiC_{(p)}$ composites, 152
Force system
A review of research into the role of guide pads in BTA deep-hole machining, 61

Geometric modeling
Optimum path forming technique for sheet metal and its realization in multi-point forming, 136
GTA welding
An analysis of volumetric radiation heat flux and experimental comparison with arc light sensing in GTA welding process, 104
Guide pad
A review of research into the role of guide pads in BTA deep-hole machining, 61

Heterogeneous nucleation
Heat transfer and thermo-mechanical stresses in a gravity casting die. Influence of process parameters, 211
High-rate shearing
A study of high-rate shearing of commercially pure aluminum sheet, 253
High-speed grinding
High-speed grinding with CBN grinding wheels — applications and future technology, 78
High-temperature oxidation
The high temperature oxidation behavior of reaction-bonded silicon carbide, 142
Hybrid processes
Mold fabrication and modification using hybrid processes of selective laser cladding and milling, 98
Hydraulic-pressure augmented
Erratum to "Investigations into the hydraulic-pressure augmented deep drawing process", 112
Hydrodynamic film
A review of research into the role of guide pads in BTA deep-hole machining, 61
Hydrostatic pressure
A new pore closure concept for the manufacturing of heavy rings, 324

Injection molding
The effective factors in the warpage problem of an injection-molded part with a thin shell feature, 1

Laminated steel tooling
Hot platen brazing to produce laminated steel tooling, 206
Large deformation
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
Laser bending
An experimental study of laser bending for sheet metals, 160
Laser material processing
Mold fabrication and modification using hybrid processes of selective laser cladding and milling, 98

Machining
Machining and fluidity of $356Al/SiC_{(p)}$ composites, 152
Magnetism
Self-propagating high temperature synthesis of $MFe_{12}O_{19}$ (M = Sr, Ba) from the reactions of metal superoxides and iron metal, 239

Melting
A study of high-rate shearing of commercially pure aluminum sheet, 253
Mesh adaptivity
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
Metal alloys
Thixotropic rheology of semisolid metal suspensions, 164
Metal-forming
Simulation of 3D metal-forming using an arbitrary Lagrangian–Eulerian finite element method, 218
Metals
Evaluation of ductile fracture models for different metals in blanking, 312
Mössbauer
Self-propagating high temperature synthesis of $MFe_{12}O_{19}$ (M = Sr, Ba) from the reactions of metal superoxides and iron metal, 239
Multi-point forming
Optimum path forming technique for sheet metal and its realization in multi-point forming, 136

New concept
A new pore closure concept for the manufacturing of heavy rings, 324

Optimum blank
A study of the optimum blank for square cup drawing using the streamline method, 146
Optimum conditions
Economic drilling conditions for a given deburring radius, 197
Optimum forming path
Optimum path forming technique for sheet metal and its realization in multi-point forming, 136
Orbital welding
Study on the effects of pulsed TIG welding parameters on delta-ferrite content, shape factor and bead quality in orbital welding of AISI 316L stainless steel plate, 233
Oxidation
The passive-oxidized behavior of SiC particles and their jointing characteristics, 127

Parametric investigation
Parametric investigation on the curling phenomenon in CONFORM process by three-dimensional finite element analysis, 53
Photoelasticity
Research on the cohesive stress in the freezing process of a composite model with materials of different elastic modulus, 132
Piercing
A compact and practical CAD/CAM system for the blanking or piercing of irregular shaped-sheet metal products for progressive working, 36
Plastic deformation
On constructing kinematically admissible velocity fields in cold sheet rolling, 287
PLZT
Processing of buffer sheets for sintering of PLZT tapes, 47
Polycrystalline plasticity
Experimental and numerical determination of texture evolution during deep drawing tests, 300
Pore closure
A new pore closure concept for the manufacturing of heavy rings, 324
Powder metallurgy
The effects of production parameters on the electrical resistivity of Cu/M_7C_3–$M_{23}C_6$ MMCs, 177
Preform
The passive-oxidized behavior of SiC particles and their jointing characteristics, 127
Process parameters
An experimental study of laser bending for sheet metals, 160
Parametric investigation on the curling phenomenon in CONFORM process by three-dimensional finite element analysis, 53
Heat transfer and thermo-mechanical stresses in a gravity casting die. Influence of process parameters, 211
Punch-stroke
Erratum to "Investigations into the hydraulic-pressure augmented deep drawing process", 112

Radiation heat
An analysis of volumetric radiation heat flux and experimental comparison with arc light sensing in GTA welding process, 104
Rapid prototyping
Mold fabrication and modification using hybrid processes of selective laser cladding and milling, 98
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Hot platen brazing to produce laminated steel tooling, 206
Rapid tooling
Hot platen brazing to produce laminated steel tooling, 206
Reaction bonded
The high temperature oxidation behavior of reaction-bonded silicon carbide, 142
Residual stresses
Relating Almen intensity to residual stresses induced by shot peening: a numerical approach, 277
Rigid–plastic
On constructing kinematically admissible velocity fields in cold sheet rolling, 287
Ring manufacturing
A new pore closure concept for the manufacturing of heavy rings, 324
Roughness
Machining and fluidity of $356Al/SiC_{(p)}$ composites, 152

Semisolid metal suspensions
Thixotropic rheology of semisolid metal suspensions, 164
Setter powders
Processing of buffer sheets for sintering of PLZT tapes, 47
Shape quality
A study of high-rate shearing of commercially pure aluminum sheet, 253
Sheet metal
An experimental study of laser bending for sheet metals, 160
Sheet metal forming
Finite element analysis and design in stainless steel sheet forming and its experimental comparison, 70
Optimum path forming technique for sheet metal and its realization in multi-point forming, 136
Sheet processing technologies
A note on a numerically controlled precision system for sheet metal bending tests, 244
Shot peening
Relating Almen intensity to residual stresses induced by shot peening: a numerical approach, 277
SiC particle
The passive-oxidized behavior of SiC particles and their jointing characteristics, 127
Silicon carbide
The high temperature oxidation behavior of reaction-bonded silicon carbide, 142
Sintering
Processing of buffer sheets for sintering of PLZT tapes, 47

The effects of production parameters on the electrical resistivity of Cu/M_7C_3–$M_{23}C_6$ MMCs, 177
Speed effect
A study of high-rate shearing of commercially pure aluminum sheet, 253
Spingback
Determination of stretch-bendability limits and springback for T-section beams, 265
Square cup drawing
A study of the optimum blank for square cup drawing using the streamline method, 146
Square cup drawing process
Finite element analysis and design in stainless steel sheet forming and its experimental comparison, 70
Stereolithography
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Stiffness matrix
A coupled finite element method for a three-dimensional analysis of the flat rolling of aluminum with different reductions, 10
Streamline method
A study of the optimum blank for square cup drawing using the streamline method, 146
Strech-bendability
Determination of stretch-bendability limits and springback for T-section beams, 265
Stress–strain analysis
A note on a numerically controlled precision system for sheet metal bending tests, 244
Supercooling
Heat transfer and thermo-mechanical stresses in a gravity casting die. Influence of process parameters, 211
Surface integrity
A review of research into the role of guide pads in BTA deep-hole machining, 61

Tape casting
Processing of buffer sheets for sintering of PLZT tapes, 47
Tensile testing
Evaluation of ductile fracture models for different metals in blanking, 312
Texture evolution
Experimental and numerical determination of texture evolution during deep drawing tests, 300
ThermoJet
Electroforming of rapid prototyping mandrels for electro-discharge machining electrodes, 186
Thermo-mechanical coupling
Three-dimensional thermo-mechanical finite element simulation of the vertical–horizontal rolling process, 89
Thermo-mechanical stress
Heat transfer and thermo-mechanical stresses in a gravity casting die. Influence of process parameters, 211
Thin shell part
The effective factors in the warpage problem of an injection-molded part with a thin shell feature, 1
Thixotropic rheology
Thixotropic rheology of semisolid metal suspensions, 164
Three-dimensional finite element analysis
Parametric investigation on the curling phenomenon in CONFORM process by three-dimensional finite element analysis, 53
TIG pulse welding
Study on the effects of pulsed TIG welding parameters on delta-ferrite content, shape factor and bead quality in orbital welding of AISI 316L stainless steel plate, 233
T-section beams
Determination of stretch-bendability limits and springback for T-section beams, 265
Tube flange
Numerical and experimental research of the cold upsetting–extruding of tube flanges, 28

Upper bound
On constructing kinematically admissible velocity fields in cold sheet rolling, 287
Upsetting–extruding
Numerical and experimental research of the cold upsetting–extruding of tube flanges, 28

Vertex angle
An analysis of volumetric radiation heat flux and experimental comparison with arc light sensing in GTA welding process, 104
Vertical–horizontal rolling
Three-dimensional thermo-mechanical finite element simulation of the vertical–horizontal rolling process, 89

Warpage
The effective factors in the warpage problem of an injection-molded part with a thin shell feature, 1
Wear
A review of research into the role of guide pads in BTA deep-hole machining, 61
Weld bead
Study on the effects of pulsed TIG welding parameters on delta-ferrite content, shape factor and bead quality in orbital welding of AISI 316L stainless steel plate, 233

X-ray diffraction
Self-propagating high temperature synthesis of $MFe_{12}O_{19}$ ($M = Sr, Ba$) from the reactions of metal superoxides and iron metal, 239

Yield criterion
Generalised yield criteria of porous sintered powder metallurgy metals, 182
